

The Clarifier

Filter Monitor **FINAL NOTICE**

In May 2025, we notified the aviation fueling industry of the planned discontinuation of CDF-2xxP EI-1583 7th Edition elements by calendar year-end 2025. Production of all SAP monitor elements, including our ACO 5" and 6" diameter models, is scheduled to terminate on December 31, 2025.

We continue to accept monitor orders while we are still actively fabricating and shipping them however, as we get near to material depletion, we are advising to place final orders ASAP. Order acceptance will be at Parker Velcon's discretion based on quantity and availability.

Customers are advised to finalize and implement post-CDF operational continuity and migration plans. The Parker Velcon EI-1588 2nd Edition CDFX series water barrier filters are fully qualified and accepted for use by all global operating standards including ATA103 (Bulletin 2022.1) and have since been provided to many global fueling operators who have converted away from SAP monitors with this drop-in replacement. We strongly advise, if you haven't already, order a set of drop-in replacement EI 1588 qualified CDFX Water Barrier Filters for trial.
